DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 and 6 of U.S. Patent No. 6,648,463 (Koga et al.) in view of Saito (5,281,262).

With respect to claim 1, Koga teaches an ink jet ink containing at least one of benzotriazole-based metal-inactivating agent and alkanolamine so that the total amount of the benzotriazole based metal-inactivating agent and the alkanolamine is from 0.1% to 0.4% by weight of the weight of the ink.

With respect to claim 2, Koga teaches that the benzotriazole-based metal-inactivating agent is one selected from the group consisting of 1,2,3-benzotriazole, 1,2,3-benzotriazole sodium salt, methyl-1H-benzotriazole, and methyl-1H-benzotriazoleamine salt.

Art Unit: 2853

With respect to claim 3, Koga teaches that the alkanolamine is triethanolamine or diethanolamine.

With respect to claim 4, the ink contains both the benzotriazole based metal inactivating agent and the alkanolamine.

Koga teaches the claimed invention with the exception of water, a coloring agent, a water soluble organic solvent and glycerol.

Saito teaches that is conventional for an ink jet ink to use an aqueous ink having a coloring agent and a water soluble organic solvent, such as glycerin (col. 1:11-15 and col. 5:61-67).

It would have been obvious to one of ordinary skill in the ink jet art at the time the invention was made to have provided the ink, as claimed by Koga, with water, a coloring agent and a water soluble organic solvent, such as glycerol, for the purpose of manufacturing an ink jet ink in a notoriously old and well known manner, as taught by Saito.
